Art Unit: 1647

**DETAILED ACTION** 

1. Receipt of Applicant's arguments filed in Paper No.28, on 27 September 2002 is

acknowledged..

2. The Terminal Declaimer filed, in Paper No.29, on 27 September 2002 has been entered.

3. The following previous rejections and objections are withdrawn in light of Applicants

amendments filed in Paper No:28 and 24 filed on 09/27/02.

(I) The obviousness-type double patenting rejection of claims 18-22, 24-41, 49-53, 61, 63, 65-

79 and 80-82 as being unpatentable over claims 1-39 of U.S. Patent No. 6,159,937.

Rejoinder of Claims 57 and 59

4a. Claim 18 (from which claim 41 is dependent) is directed to an allowable product. Pursuant

to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86),

claims 57 and 59 directed to the processes of using the patentable product in treating cancer and

arthritis, previously withdrawn from consideration as a result of a restriction requirement, are now

subject to being rejoined. Process claims 57 and 59 are hereby rejoined and fully examined for

patentability under 37 CFR 1.104.

Thus claims 18-22, 24-41, 49-53, 57, 59,61, 63, 65-79 and 80-82 are pending and under

consideration.

Claim Rejections - 35 U.S.C. § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is

Page 3

Art Unit: 1647

most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5a. Claims 49, 57 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a method of treating arthritis, pancreatitis and ARDS like syndrome, by administering to a subject in need of said treatment a pharmaceutically effective amount of the nonnaturally occurring polypeptide recited in instant claim 18, does not reasonably provide enablement a method of "all" possible diseases treatable by a substance which has the properties recited in a-k of claim 49, or a method of treating cancer, by administering to a subject in need of said treatment a pharmaceutically effective amount of the non-naturally occurring polypeptide recited in instant claim 18. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

Claim 49 which recites "a method of treating a disease which is treatable by a substance which has at least one of the properties recited in claim 49, (a-K)..", what is claimed is a method of treating "all" possible diseases that are treatable by a substance that displays the properties recited in a-k of claim 49, however, the instant specification demonstrates that IT9302, inhibits the production of IL-8, in a dose dependant manner and that IT9302 also induces the production of IRAP, (see page 37, lines 6-30). The instant specification demonstrates that the synthetic peptide of the instant invention has dose-dependent inhibitory effects on pro-inflammatory processes, including IL-8 production and monocyte and T cell migration. Furthermore, instant specification shows that the synthetic peptide of the instant invention modulates TNF-alpha production and inhibits LPS

Page 4

Art Unit: 1647

induced leukopetinia. Thus, instant specification clearly shows that the peptide of the instant invention can be used in treating inflammatory diseases, such as pancreatitis, ARDS like syndrome and arthritis. Therefore, while instant specification is enabling for a method of treating arthritis, pancreatitis and ARDS like syndrome, it does not enable for a method of treating all possible diseases that might be treatable by a substance that displays the properties recited in a-k of claim 49, because one of ordinary skill in the art would not be able to predict if the peptide of the instant invention would be effective in treating "all" possible diseases t that are treatable by a substance that displays the properties of claim 49, a-k. With respect to claim 57 instant specification does not disclose a method of treating cancer by administering to a subject suffering from cancer an effective amount of the peptide of the instant invention. Applicants have not shown that the nonopeptide of instant invention is effective against cancer, and if so, which types of cancer. Instant specification establishes no nexus between cancer and the nonopeptide of the instant invention. The criteria set forth in Ex parte Forman (230 USPQ 546 (Bd. Pat. App. & Int. 1986), and reiterated in In re Wands (858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988)), which include (1) the quantity of experimentation necessary, (2) the amount of direction or guidance presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art and (8) the breadth of the claims, is the basis for determining undue extermination. In the instant application, instant specification establishes a link between the peptide of the instant invention and only a method of treating arthritis, pancreatitis and ARDS like syndrome. However, the skilled artisan would not

Page 5

Art Unit: 1647

be able to predict whether the peptide of the instant invention would be effective against cancer.

Furthermore, there is no guidance that the peptide of the instant invention would be effective against

"all" possible diseases that are treatable by a substance that displays the properties recited in claim

49, a-k. Claim 49 encompasses an infinite number of diseases, and one ordinary skill in the art can

not extrapolate from the teachings of the instant specification that the peptide of the instant invention

can be used to treat each and every disease that can be treated by a substance that displays the

properties recited in claim 49 a-k. Likewise, one of ordinary skill in the art can not extrapolate from

the teachings of the instant specification that the peptide of the instant invention can be used to treat

cancer, because instant specification does not establish a link between the peptide of the instant

invention and cancer. Cancer is not one disease, it is a very complex condition which encompasses

various types of malignant neoplasms, and all cancers are not caused by the same culprits and are

not treatable by the same agents.

Therefore, Applicants are only enabling for a method of treating arthritis, pancreatitis

and ARDS like syndrome, by administering to a subject in need of said treatment a

pharmaceutically effective amount of the non-naturally occurring polypeptide recited in

instant claim 18.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Page 6

Art Unit: 1647

6. Claims 49, 51-53, 57, 59 and 59 are rejected under 35 U.S.C. 112, second paragraph, as being

indefinite for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention.

6a. Claim 49 recites the limitation "a method of treating a disease which is treatable by a

substance which has at least one of the properties recited in claim 49, (a-K)..", which renders the

claim indefinite, because the metes and bounds of the claim can not be ascertained, since no specific

disease is recited. Reciting the specific diseases that can be treating by a substance which has at least

one of the properties recited in claim 49, (a-K) would obviate this rejection.

Claims 51-53, 57-59, 61 are rejected 35 U.S.C. § 112, second paragraph, insofar as they

depend on claim 49.

Conclusion

7a. Claims 18-22, 24-41, 63, 65-79 and 80-82 are allowable.

7b. Claims 51-53, 59 and 61 would be allowable if rewritten to overcome the rejection(s) under

35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the

limitations of the base claim and any intervening claims.

Advisory Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fozia Hamud whose telephone number is (703) 308-8891. The examiner can normally be reached an Manday Thursday for a (2011) (Fig. 4) 2000 (Fig. 4).

normally be reached on Monday-Thursday from 6:30AM to 4:00PM (Eastern time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Gary Kunz, can be reached on (703) 308-4623.

Official papers filed by fax should be directed to (703) 308-4227. Faxed draft or informal communications with the examiner should be directed to (703) 308-0294.
